

Large-scale forest certification in Indonesia

Why this initiative?

Indonesia, with an estimated annual loss of forest of 1.8 million ha, is accountable for about 14% of global forest loss. It is estimated that 80% of Indonesia's carbon emissions are related to deforestation of forests and peat-lands and related land-use changes, and that Indonesia alone would be accountable for around 6% of global greenhouse gas emissions turning Indonesia into the world's fourth largest greenhouse gas emitter after the USA, EU and China.

Sustainable forest management means that harvest levels are in balance with forest re-growth, with respect to the rights of local people and keeping intact wildlife habitat. Market parties along the commodity chain need to be able to distinguish sustainably produced wood.

This calls for the need of certification of forest management. As a well-known and respected standard in the global world, The Borneo Initiative promotes FSC®-certification of forest management, expecting the forest management units to earn qualifications for Indonesia's domestic SVLK-PHPL forest management certificates in their stride.

Forest Certification

The Borneo Initiative offers forest concessions a subsidy of 2-3 USD/ha. The concessionaires can use this grant to pay specific certification costs i.e. the costs of auditors, a certification coach and consultants on RIL (Reduced Impact Logging), HCV (High Conservation Value) studies or social assessments.

Support is offered to forest management units with a high potential and a good motivation for forest certification. The certificate is expected to be achieved within 2-3 years.

Currently (August 2016), The Borneo Initiative is supporting no less than 41 forest concessions with a total coverage of 3.9 million ha, all tropical rainforest. The aim is to expand coverage up to 6 million ha by 2018.

Given this coverage in terms of number of companies and hectares, The Borneo Initiative can be considered one of the largest forest certification schemes in the tropical region. This large-scale approach is possible by working as a unifying platform, creating partnerships with on-the-ground organizations like APHI, TFF, TNC, GFTN and Wana Aksara, who offer coaching and additional financial support to forest concessions.

Market Development

The Borneo Initiative also supports forest companies to gain market recognition for their certification efforts. The Borneo Initiative collects the profiles of all the forest concessions and industries it supports. In association with partner organisations in these markets, these profiles are distributed to leading trading companies in the major FSC markets, EU and USA, but potentially also Japan, China and Australia. The Borneo Initiative facilitates ad-hoc information exchange and annual trade encounters.

The Forest Certification Program

Year	Forest concessions	Support area (ha)	FSC	FSC area (ha)

Organisation

The Borneo Initiative is a foundation established in 2008, with offices in The Netherlands and Indonesia. Its mission is to prevent the loss of tropical forests due to deforestation and over-exploitation. The current focus is on Indonesia, but coverage may expand to Malaysia and PNG as well over time.
